

Project Title – REGNAcon!

Introduction -

The page for REGNAcon will serve as a way for visitors to get information regarding guests, vendors, and events being held at this convention. The page will allow for a sign-up for a newsletter, as well as provide schedules, information concerning guests and vendors, a registration page for vendor space and a method for purchasing entrance tickets. The page will need to have the functionality to add/delete guest information and update schedules/new spaces.

User Interface Design and Prototype -

Each supporting component will be referenced in the main component in order to offer a seamless navigation experience between topics. Each page will have a header and a footer, with breadcrumbs leading back to Home and About Us. On the Guests page, the goal is to have a cleaner interface where text is displayed when each picture is clicked. The FAQ page would also benefit from cleaning up the text display.

Navigation Structure -

Navigation will mostly flow from the Home page and the navigation bar. Clickable components will expand information from there specific to each topic (Guests, FAQ, Schedule, etc).

Routing: /home
 /guests
 /schedule
 /reservations (may be combined with tickets)
 /tickets
 /travel
 /faq
 /about (combined with contact)
